DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group A (claims 1-10) in the reply filed on 1/25/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 11-15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 1/25/05.
3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Drawings

4. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "80a" has been used to designate both "shift rod gear" (fig 13) and "torsion portion" (fig 17). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being

amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

5. The disclosure is objected to because reference character "80a" has been used to designate both "shift rod gear" (page 15) and "torsion portion" (page 17). Appropriate correction is required.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

7. Claims 1 and 5 are rejected under 35 U.S.C. 102(a) as being anticipated by Sawyer et al. (US 6,544,083). Sawyer shows an outboard motor with a shift rod (36), shifter clutch (60), forward gear (31), and reverse gear (32). An actuator (not numbered) is shown inside the motor and atop the shift rod (see fig 1). The controller is the mechanical link that is connected to the actuator and extends outside of the motor cowling (fig 1). Sawyer shows a possible shift rod configuration is fig 5. The shift rod

with a portion of decreased diameter. This constitutes a torsion portion which constitutes a shock mitigator.

Allowable Subject Matter

8. Claims 2-4 and 6-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Natsume ('400) shows a shift rod for an outboard motor. The shift rod has a narrow portion (see figs 2 and 3). Onoue ('613) shows a drive shaft with a shock absorbing portion. Iwai ('796) shows a drive shaft with a shock absorbing portion that comprises a narrow portion. Kanno ('643) shows an electric motor for actuating a shift rod. Towner ('939) shows an electric motor for actuating a shift rod. Shields ('360) shows a synchronizer gear for an outboard motor dog clutch.
